

SV Analytica Deployment

SV Analytica Deployment

What it can do for your business

SV Analytica Deployment enables the deployment and sharing of predictive analytics across the enterprise. The solution provides centralized, secure storage of analytical assets, and advanced capabilities for management and control of predictive analytic processes. It also offers advanced mechanisms for delivering analytics results to users.

SV Analytica Deployment provides the enterprise platform for integrating SV Analytica products into complete business solutions and enable widespread deployment and use of predictive analytics.

The features of SV Analytica Deployment include centralized, secure and auditable storage of analytical assets and advanced capabilities for management and control of predictive analytic processes, as well as sophisticated mechanisms for delivering the results of analytical processing to the end users.

Deployment Features

Collaboration Support

Share analytical assets from a central repository, and allow users to control how they see and use analytics. Collect information on decision outcomes to refine predictive models

Automated Processes

Run jobs on demand, or on a set schedule, or when triggered by other events. Benefit from an automated process for evaluating predictive models that uses a champion-challenger approach.

Faster Deployment

Deploy streams created in SV Analytica Modeler, and take advantage of application server clustering and virtualization.

Access & Version Control

Control access to analytical assets and use version control to ensure that the right copies are being used in production processes.

Advanced Mechanisms

Share Analytics Across The Enterprise

Manage analytical assets in a central repository, allowing users to share with others, reuse models and other assets, and standardize best practices.

Secure Your Data

Control access to analytical assets using version control.

You can also integrate with existing authentication systems for authentication and single sign-on capabilities.

Automate Processes

Construct and automate analytical processes, including those that involve multiple steps and tools, to deliver more consistent results.

Integrate With Existing Infrastructure

Embed analytic results in front-line business processes while integrating with standard programming tools and interfaces.
